

The most effective vacuum for the removal of allergens

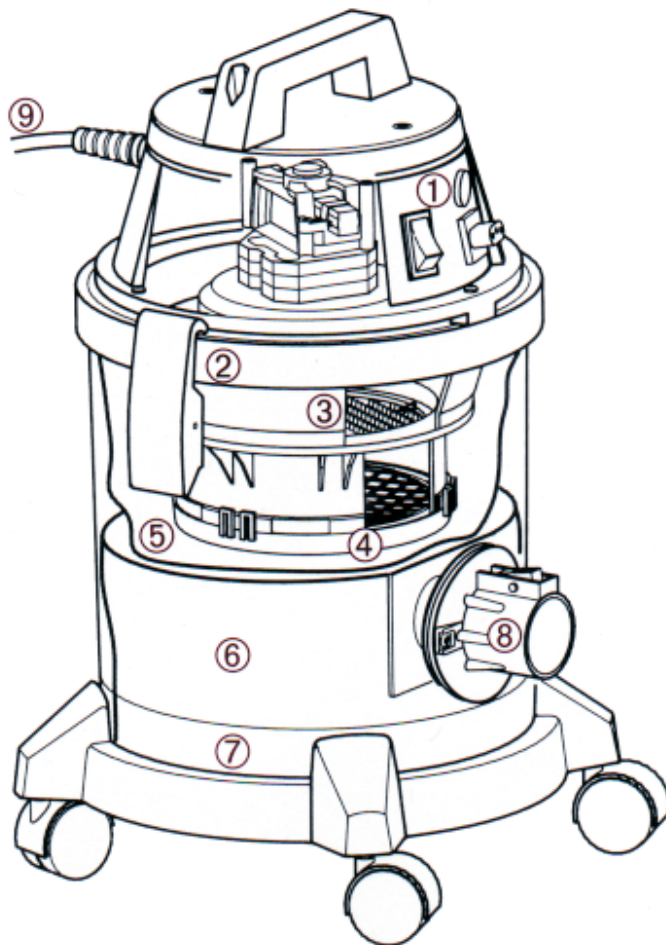

An Easy and Affordable Solution for Allergy Relief

Common allergens, such as pollen, mold, animal dander, and dust mites collect in carpeting, draperies, bedding and furniture. Allergy sufferers can find relief using Frham Safety's Allergy Vacuum to combat these allergens.

Unlike conventional household vacuums which exhaust unseen contaminants back into the air and may actually cause an allergic reaction, the Allergy Vacuum traps harmful allergens with progressively finer stages of filtration. Its four-stage filtration system includes: a disposable paper bag, a washable embossed polyester filter bag, a disposable impact filter and a H.E.P.A.-type (High Efficiency Particulate Air) filter that is 99% efficient at 0.3 microns.

As an added precaution, if the H.E.P.A.-type filter is removed, the vacuum will not operate. This patented safety interlock system assures user safety and prevents allergens from being redistributed back into the air.

The Allergy Vacuum comes complete with tool kit and caddy.

SPECIFICATIONS

| | |
|----------------------|------------------------------------|
| Tank Capacity | 4 gallons (15 ltrs) |
| Power | 1.25 hp (.93 kw) |
| Dry Capacity | .21 cu. ft. (.006 m ³) |
| CFM | 95 (2.69 m ³) |
| Static Lift | 85 in. (2160 mm) |
| DbA Rating | 68 |
| Casters | 4 - 2 in. (5 cm) |
| Cord | 40ft. (12 m) |
